Turning on Double Spot

Turning on Double Spot

- 1 Plug in the power supply and connect to the DC IN jack on Double Spot.
- 2 Press ***Power Button*** to turn on.

Charging Double Spot

Double Spot has been designed to equip with a replaceable Battery Pack (pre-installed) to power without using the power supply. When the adapter is plugged in, the battery will charge.

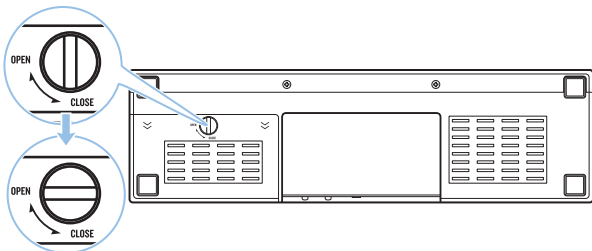

The charging indicator combined to **Power Button** indicates the charging status:

Mode	Charging	Fully Charged
Standby	<i>Blinking Green (Slowly)</i>	<i>Off (No light)</i>
Power on (not connected)	<i>Blinks Green</i>	<i>Blinks White</i>
Bluetooth or Aux in mode	<i>Solid Green</i>	<i>Solid White</i>

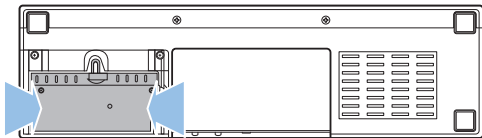

- * *When operating the unit in battery mode, alternately flashing white and green means the battery power is low.*
- * *Please fully charge Double Spot before using on battery power. You can still enjoy Double Spot while charging.*

Replacing Battery Pack

- 1 Twist the screw clockwise from **CLOSE** to **OPEN**, and push down to remove the battery cover.

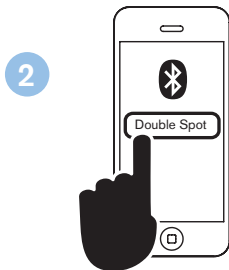

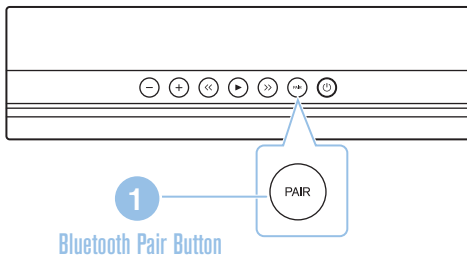

- 2 Replace the old Battery Pack with a new one (Purchased separately) and press it gently to lock in place.

- 3 Reverse Step 1 above to close the battery cover.

Bluetooth Pairing

Bluetooth Pairing

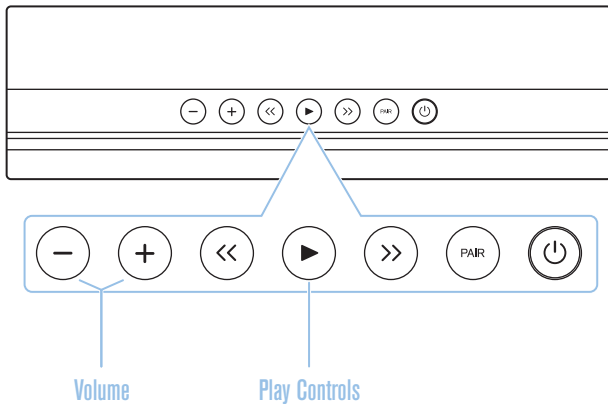

- 1 Press **Pair Button** on Double Spot to start pair mode. The **Power Button** light will flash rapidly.
- 2 On your phone, tablet or computer, enter your Bluetooth settings menu to detect available devices. Once Double Spot is detected, select it from the list of available devices to connect.

On iPod, iPhone and iPad devices tap to select "Double Spot" from the list of devices in Bluetooth settings

Bluetooth Pairing

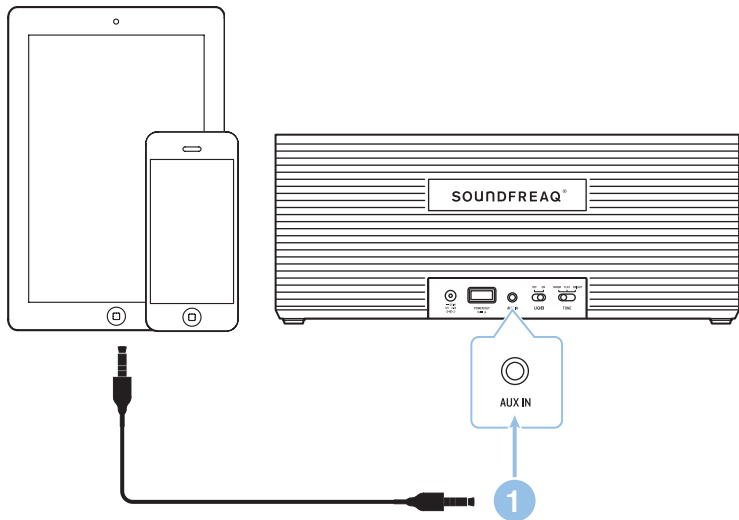

- * Please visit “support.soundfreaq.com” for detailed pairing instructions for Mac or Windows PC.
- * To pair another device, simply repeat the pairing process with steps 1 and 2 above. To re-connect a device that has already been paired, press PAIR button on Double Spot and select “Double Spot” from your Bluetooth settings menu on your phone, tablet or computer.
- * On most devices, no password is needed to pair, however, if a password is requested the default password is “1234”.
- * You can change the volume by either using the volume buttons on Double Spot or changing the volume on your paired device. For max volume, turn both volumes to maximum.

Listening via Bluetooth

- * You can use the **Play Control Buttons** on Double Spot to remotely control you connected devices and play, pause and skip tracks.

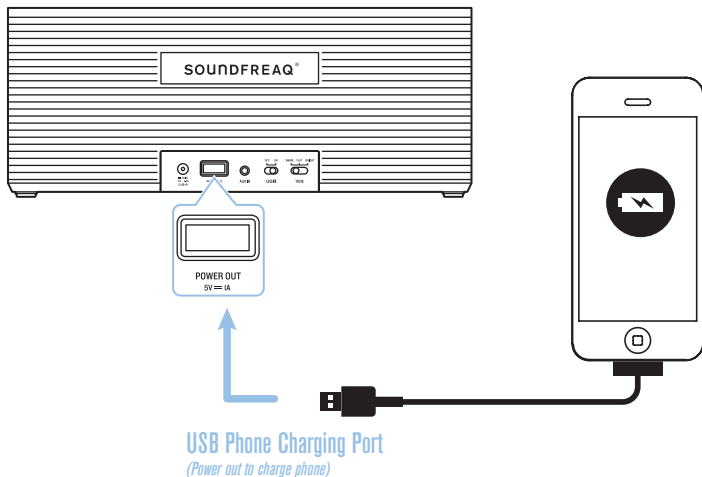

Listening via Line In

Listening via Line In

- 1 Connect any device with a standard headphone jack with a line in cable (not included). When a line in cable is plugged into Aux Line In, Double Spot will automatically change to Line In source mode. To change to Bluetooth mode, disconnect the line in cable.
- * *In order to save the energy, please unplug the line in cable from the Aux Line In of Double Spot when do not use.*

Charging Devices with USB Power Port

Charging Devices with USB Power Port

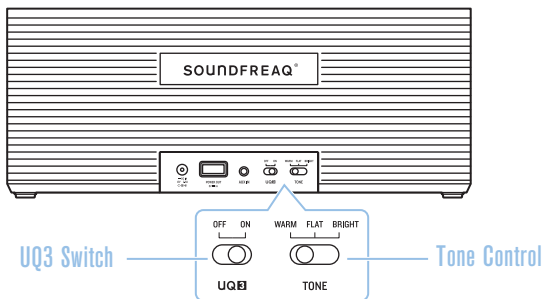

You can charge most phones as well as other USB chargeable devices such as Bluetooth headsets and digital cameras directly from Double Spot.

When Double Spot is using the power supply, simply connect your device to the USB Port on the back of Double Spot to begin charging.

When Double Spot is using the battery power, turn on the unit and connect your device to the USB Port on the back of Double Spot to begin charging.

- * *Double Spot can charge your phone both when Double Spot is being charged or running on battery power. The maximum charging output current is 1A. Please use the charging cable that was provided with your device.*

Optimizing Sound Quality

Optimizing Sound Quality

UQ3™ is proprietary technology that enhances stereo separation. To turn UQ3 on/off, slide the **UQ3** switch.

Slide **Tone Control** switch to select a bright, warm or flat tone for your listening preference.

TIP: Double Spot has been tuned to a balanced acoustic profile. You can use the EQ settings on your playback device to further customize the EQ balance to suit your personal preference. **Note:** Some custom EQ settings when combined with UQ3 enhancement may cause distortion.

TIP: For playback in Bluetooth or Aux mode, the output volume is set by both the volume control on Double Spot and the source device. Both may be adjusted to set your preferred listening volume. Typically, sound quality is best when the volume of the source device is between 70~90%. **Note:** As with any speaker system, if the volume on both your source device and the speaker are at maximum output, it is possible to overdrive the speakers and cause distortion. When using an iOS device or other device that offers a “volume limit” feature, turn this setting off for higher volume listening in Bluetooth or Aux mode.
